

Quick, Easy, Safe Construction

Company Profile:

Founded in 1987, Strong House Plastics Industry Co., Ltd. is a professional manufacturer of double-layer hollow plastic-steel roofing sheet and related accessories, including gutter, ridge board and edge protector. During the initial stage, Strong House launched the first ever double-layer hollow integrated plastic-steel roofing sheet in the world, which provided for being a high-quality safe construction roofing material of steel structure houses.

Taiwan is located in the heat and warm zone, thus the steel structure houses are very common here. After exposing to sunlight, the general iron-steel roofing may cause extraordinary hot and uncomfortable inside the house; therefore, this Company is focusing on researching the heat-resistance of roofing sheets. We selected superior heat-resistant materials and integrated with roofing sheets to not only prolong the lifespan of roofing sheets, but also can achieve the heat-resistant result effectively. Thus, our roofing sheet products are the energy-saving and carbon-reducing green building material.

Recently, this Company launched the double-layer hollow wood-vinyl siding sheet, and the hidden method of its tapping screws was the initial invention in the world. Its structural joint had been revised and modified for many times to refine, and this product had approved by our clients and become more popular in the market currently.

The long-run bug in the roofing sheet products is that after screwing the tapping screws, no one can guarantee that the tapping screw will still be secured without loosening after standing out for all kinds of weather. As a result, the joint between screw and roofing sheet is the main reason of causing the leaking problem for roofing sheet roofing, thus Strong House developed and launched the double-layer hollow flat bottom roofing sheet, which is not only beautiful and dignified, but also its unrivaled development of auto joining after screwing the tapping screw. It is a weather-proof product and can solve the long-run problem in the roofing sheet manufacturing.

R&D team of Strong House has the strength and confidence to continuously develop and produce the high-quality roofing sheet products, siding sheets and related accessories, as well as conquer the global markets, and make this internationalized double-layer hollow plastic-steel heat-resistant roofing sheet to be more popularized all over the world.

Best Roofing Material for Coastal Area with Excessive PH Level

Features of Strong House PVC Plastic-Steel:

- *Double-layered hollow and integrated construction
- *Excellent heat-resistance, highly durable, acid-proof, alkali-proof, anti-rust, isolative, non-conductive, self-extinguishing, recyclable, wind-resistant, sound-proofing ensure quietness even under rain and carbon emission reducing building materials
- *Strong House building materials can be used more than 20 years
- *Strong House building materials can be customized and is easy to be built up.

Vacation resort, Chi-Bei Island, Pong-Hu was built in December, 1998 and survived the 17-degree typhoon in June, 2001 with no damage.

Applicable Area:

Farm House,
Factory and
coastal area

Shi-Lai square garden motel (Chao-Chou township Chie-Shou road in Ping-Dong) was built in January, 1992 and still operating with no remodeling.
